

Rating and Review System

Post-Order Review [🔗](#)

- **Prompt Clients to Review:** After completing an order, automatically prompt clients to leave feedback. This can include:
 - A star-based rating system (e.g., 1 to 5 stars).
 - An optional text field for leaving detailed comments.
- **Review Submission Interface:** Design a simple form for clients to quickly rate and review the freelancer.
- **Review system for both Seller(Individual) and Buyer(Company):**
- **Aggregate Ratings:** Calculate an average rating for freelancers based on all reviews.
 - Example: If a freelancer has 3 reviews with ratings of 4, 5, and 3, the displayed rating is $(4 + 5 + 3) / 3 = 4.0$.
- To enhance the **Post-Order Review** system we will add **filter**, **sort**, and **search** functionalities:
 - **Filter:** Allows users to filter reviews based on rating, time frame, or specific keywords.
 - **Sort:** Provides options to sort reviews by date, rating, or helpfulness.
 - **Search:** Allows users to search for specific reviews based on keywords or phrases in the comments.
